

The Closer Scorecard

Where: sequ3nce.ai/dashboard → **Team Performance** → the new **Closer Scorecard** tab. This is your closer team on one screen: who filed their EOD, everyone's real numbers, and what each closer's biggest gap is worth in dollars. (The screenshots below use sample closers — yours shows your real roster.)

1 EOD check-ins — who filed today, at a glance

EOD check-ins today 2 of 4 filed

✓ Closer 1 9:12 AM

✓ Closer 3 10:45 AM

Closer 2 — not yet

Closer 4 — not yet

Yesterday: Closer 4 worked but never filed.

- **Green** = filed today, with the time they filed. **Amber** = hasn't filed yet.
- The line underneath calls out anyone who **worked yesterday but never filed** — those are the real misses. Someone with no calls yesterday isn't counted as missing anything.

2 The ledger — real numbers, and a whiteboard

LEDGER · AUG 22 – AUG 28 (PREVIEW FIXTURE)

Closer Scorecard

Lock as baseline Revert to baseline Reset to actuals

Change any number and everything downstream of it recalculates at the current conversion rates. Nothing upstream ever moves, and nothing here saves — it's a whiteboard. Lock a baseline before a meeting to show deltas against it. Cells show the blended truth: manager corrections beat closer entries beat what we measured, and the chips under each name say who filed and who confirmed their calls.

Tier 1 price	Tier 2 price	Tier 3 price	Cost per booked call	Target CDPBC										
6800	9800	20000	200	800										
CLOSER	BOOKED	LIVE	CLOSES	GROSS \$	COLLECTED \$	FU BKD	FU SHOWN	SHOW	LIVE CLOSE	BKD CLOSE	AOV	COLLECT	GDPBC	
Closer 1 filed 5/5 34/36 calls ✓	60	36	7	74600	61000	14	9	60.0%	19.4%	11.7%	\$10,657	81.8%	\$1,243	📈
Closer 2 filed 3/5 11/30 calls ✓	58	30	4	33200	24000	12	4	51.7%	13.3%	6.9%	\$8,300	72.3%	\$572	
Closer 3 filed 5/5 35/35 calls ✓	55	35	6	58800	52000	11	7	63.6%	17.1%	10.9%	\$9,800	88.4%	\$1,069	
Closer 4 filed 0/4 0/24 calls ✓	52	24	3	20400	13600	9	3	46.2%	12.5%	5.8%	\$6,800	66.7%	\$392	
TEAM	225	125	20	187000	150600	46	23	55.6%	16.0%	8.9%	\$9,350	80.5%	\$831	

Left side: each closer's funnel. Under each name: how many days they filed, and how many of their calls they've confirmed.

OWN	SHOW	LIVE CLOSE	BKD CLOSE	AOV	COLLECT	GDPBC	CDPBC	ROAS	FU SHOW	GAP \$
9	60.0%	19.4%	11.7%	\$10,657	81.8%	\$1,243	\$1,017	5.1x	64.3%	at target
1	51.7%	13.3%	6.9%	\$8,300	72.3%	\$572	\$414	2.1x	33.3%	\$22,400
7	63.6%	17.1%	10.9%	\$9,800	88.4%	\$1,069	\$945	4.7x	63.6%	at target
3	46.2%	12.5%	5.8%	\$6,800	66.7%	\$392	\$262	1.3x	33.3%	\$28,000
23	55.6%	16.0%	8.9%	\$9,350	80.5%	\$831	\$669	3.3x	50.0%	\$29,400

Right side (scroll the table): the rates and money-per-booked-call columns.

Bkd close Closes ÷ booked — the closer KPI.

CDPBC **Cash collected per booked call — the keystone number.** Green when at/above your target, red when under.

ROAS CDPBC against your cost per booked call (e.g. 3.3x = every \$1 of ad spend on their calendar returned \$3.30).

Gap \$ What the distance to your CDPBC target cost this period, in dollars.

- **Every count cell is editable — it's a whiteboard.** Change any number and everything downstream recalculates at current rates. Nothing saves; leaving the page returns to actuals.
- **Lock as baseline** before a meeting, project a scenario, and the table shows deltas against the locked version. **Reset to actuals** clears it.
- The settings strip above the table (tier prices, cost per booked call, target CDPBC) is yours to edit — changes save on click-away.

3 Tier pitches — are they pitching high and closing low?

CLOSER	@ \$6,800	@ \$9,800	@ \$20,000	PITCHED	AVG TIER PITCHED	AOV	DOWNSELL GAP
Closer 1	8	20	8	36	\$11,400	\$10,657	\$-743
Closer 2	18	10	2	30	\$8,680	\$8,300	\$-380
Closer 3	6	22	7	35	\$11,326	\$9,800	\$-1,526
Closer 4	14	9	1	24	\$8,475	\$6,800	\$-1,675
TEAM	46	61	18	125	\$10,165	\$9,350	\$-815

- Pitch counts come from each closer's daily form. **Avg tier pitched** is the average price they put in front of prospects; **AOV** is what they actually closed at.
- Downsell gap** = AOV minus avg tier pitched. Red negative = closing below what they pitch — a discounting/downselling conversation, not a closing-skill one.

4 What the gaps are worth

Closer 1 CDPBC \$1,017 · ROAS 5.1x Work on Collection rate — 81.8% → 88.4% (team best) = +\$4,973 · payment plans and PIF motion all levers	at target
Closer 2 CDPBC \$414 · ROAS 2.1x · gap to target \$22,400 Work on Live close rate — 13.3% → 19.4% (team best) = +\$11,000 · discovery depth, not closing mechanics all levers	under target
Closer 3 CDPBC \$945 · ROAS 4.7x Work on Live close rate — 17.1% → 19.4% (team best) = +\$6,981 · discovery depth, not closing mechanics all levers	at target
Closer 4 CDPBC \$262 · ROAS 1.3x · gap to target \$28,000 Work on AOV — \$6,800 → \$10,657 (team best) = +\$7,714 · tier positioning / downselling all levers	under target

- For each closer, we compare their four levers (show rate, live close rate, AOV, collection rate) to the **team's best**, and name the one lever worth the most money if they matched it.
- "At target" closers with no lever named are your control group — document what they do.
- This panel recalculates live as you play with the whiteboard above.

Where these numbers come from — and why you can trust them.

Three layers, never blended silently: what the bot **measured**, what the closer **reported** on their daily form, and what **you corrected**. Your correction always wins; a closer's entry beats the measurement. Follow-ups count automatically once your team puts the words **"follow up"** in follow-up calendar titles. And every closer now confirms their calls' figures daily from their app — the "calls ✓" count under each name tells you who's actually doing it.
